Edit: There was no hacker named "hedgehog". Despite the name, you can't count that person as the person who made the hack. It was made by "emeritus" (the name of the person who made it) and "jordanq" (the name that my friend who has the same GitHub account as "emeritus" has) (Both are my friends, I just put their real names in here). Both of them are probably standing somewhere. They probably haven't ever seen each other, but I am pretty sure that they both know that I wouldn't lie to you people. Edit: It also only works when you are using Windows 7 or later. If you are using an old version of Windows, then it wouldn't work. Edit: You need to have an old school gameboy to run this hack. If you use Windows 10, then there is nothing special you need to do. Edit: If you don't know how to install a hack, then you should use the following step by step guide to install and use hacks. Edit: If you don't want to use the following steps to install and use hacks, then you can also install the hack manually. All you need to do is: 1) Download and extract the hack, 2) Open up the hack (Kapil), 3) Click on the ? icon on the top right of the screen and on the "Standard Mode" tab, 4) It will ask you to put in your gameboy screen name and password (they are both the same) and enter the gameboy into the box that says "The version of the ROM that you're using for this hack. Make sure that it's the correct ROM". 5) Wait for the hack to finish running, 6) Then you can close the hack. All you need to do is: 1) Download and extract the hack
